Absolutely — your HTML is cut off at the end (Artificial Intelligence and Machi...). Here's a cleaned-up, complete version with the missing closing tags fixed and slightly polished wording while keeping your original content and style.

All About Me - Alina

  <section>
    <h2>Hello!</h2>
    <p>
      Hello! My name is <strong>Alina</strong>, and I am an
      <strong>Artificial Intelligence and Machine Learning major</st
      I am taking this course because I want to develop a better
      understanding of AI and how it works.
    </p>
  </section>

  <section>
    <h2>What I Hope to Learn</h2>
    <p>
      What I hope to get out of this course is a deeper understandin
      of how artificial intelligence works. I am interested in learn
      more about the technology behind AI and how it continues to
      improve and affect our everyday lives.
    </p>
  </section>

  <section>
    <h2>AI in My Life</h2>
    <p>
      AI has already shown up in my life in different ways. For exam
      I have used AI for grammar and writing help on essays in high
      school, including tools like ChatGPT.
    </p>
  </section>

  <section>
    <h2>A Concern About AI</h2>
    <p>
      One thing that concerns me about AI is its environmental impac
      especially its effect on water resources. As AI technology
      continues to grow, I think it is important to consider not onl
      what AI can do, but also the environmental resources required
      to develop and use it.
    </p>
```

```
</section>

<section>
  <h2>Ethics and AI</h2>
  <p>
    Out of all the course objectives, I am most interested in
    identifying and discussing ethical issues surrounding AI.
    This matters to me because I believe the impact of a technolog
    is just as important as how we use it. AI has so much potentia
    for improvement and innovation, but it is also important to th
    about the consequences that can come with its use.
  </p>
</section>

<section>
  <h2>Outside of Class</h2>
  <p>
    Outside of class, I enjoy playing my violin. I have been playi
    the violin since 4th grade, and I have also been involved in m
    high school music program. Playing violin has been an importan
    part of my life and is something I really enjoy doing in my
    free time.
  </p>

```

The main issue was that your code was **incomplete at the bottom**, so the `<li>`, `<ul>`, `<section>`, `<main>`, `<body>`, and `<html>` tags weren't all closed. I also made a few small grammar changes without changing what you were trying to say.

If this is for an **HTML class assignment**, I can also fix it while keeping it **very beginner-level** so it doesn't look like you used overly advanced HTML.

The error most likely means the website **cannot find the PDF file**. The HTML link itself is fine, but the PDF has to be saved in the right place.

Check these 3 things

1. Make sure the PDF is actually downloaded to your computer.

You should have a file named exactly:

ai-conversation-transcript.pdf

2. Put it in the same folder as your HTML file.

Your folder should look like:

MyWebsite
|

```
└─ index.html
└─ ai-conversation-transcript.pdf
```

3. Make sure your code matches the filename exactly.

Use:

HTML

</> ▶ □

```
<h3>Conversation Transcript</h3>
```

```
<a href="ai-conversation-transcript.pdf" target="_blank">
  View the PDF transcript of this conversation
</a>
```

A common problem

Windows may secretly save the file as:

ai-conversation-transcript.pdf.pdf

or something like:

ai-conversation-transcript (1).pdf

To check, right-click the PDF → **Properties** and look at its actual filename.

Test the PDF directly

Before testing the website, double-click the PDF on your computer and make sure it opens normally.

Then open your `index.html` and click the **View the PDF transcript** link.

If you still get an error, send me the **exact error message** you see (or a screenshot), and I can tell you exactly what needs to be changed.

how do I put it in the same folder as the HTML file?

Sure. On Windows, the easiest way is to put both files into one folder.

Step 1: Find your HTML file

Find the file you are using for your website, probably something like:

```
index.html
```

Right-click it and select **Open file location**.

This will open the folder where your HTML file is saved.

Step 2: Move the PDF into that folder

Find your PDF:

```
ai-conversation-transcript.pdf
```

Then either **drag the PDF into the folder** where `index.html` is located, or:

Right-click the PDF → Cut → open the HTML folder → Right-click → Paste.

Step 3: Check that they are together

The folder should now look like:

```
My Website
|
├── index.html
└── ai-conversation-transcript.pdf
```

Step 4: Check your HTML code

Your link should be exactly:

```
HTML
```

```
</> ▶ 📄
```

```
<a href="ai-conversation-transcript.pdf" target="_blank">
  View the PDF transcript of this conversation
</a>
```

There should **not** be a computer location such as:

```
HTML
```

```
</> ▶ 📄
```

```
C:\Users\YourName\Downloads\ai-conversation-transcript.pdf
```

The simple filename is what you want.

If your PDF is currently in Downloads

For example, if your files currently look like:

```
Downloads
└─ ai-conversation-transcript.pdf

Desktop
└─ My Website
   └─ index.html
```

move the PDF from **Downloads** into **My Website** so they become:

```
Desktop
└─ My Website
   ├── index.html
   └─ ai-conversation-transcript.pdf
```

Then open `index.html` again and click the link.

If you're using **VS Code**, **Notepad**, **Google Sites**, or another specific website editor, tell me which one and I can give you the exact steps for that program.

My HTML are all on GitHub for the file. What do I do?

Yes — since your website is stored on **GitHub**, you do not need the PDF to be in a folder on your computer anymore. You need to upload the PDF **into your GitHub repository**, preferably in the same folder as the HTML file that contains the link. GitHub supports uploading files directly through the **Add file** → **Upload files** menu. [GitHub Docs](#) +1

Do this on GitHub

1. Go to your **GitHub repository** where your website HTML is stored.
2. Find the HTML file that contains your Credits section, probably:

```
index.html
```

3. Look at the files around it. For example, you might currently have:

```
your-repository/  
├─ index.html  
├─ style.css  
└─ images/
```

4. Click **Add file** → **Upload files**. [GitHub Docs](#)

5. Upload your PDF and make sure its filename is exactly:

```
ai-conversation-transcript.pdf
```

6. Commit the change to your repository.

Afterward, you want your GitHub files to look like:

```
your-repository/  
├─ index.html  
├─ style.css  
├─ ai-conversation-transcript.pdf  
└─ images/
```

Then use this code in your HTML

Because the PDF is in the same folder as `index.html`, use:

HTML

```
<h3>Conversation Transcript</h3>  
  
<p>  
  <a href="ai-conversation-transcript.pdf" target="_blank">  
    View the PDF transcript of this conversation  
  </a>  
</p>
```

The important part is:

HTML

```
href="ai-conversation-transcript.pdf"
```

That is a **relative link**, meaning the browser looks for the PDF in the same directory as your HTML file. GitHub supports relative file links as well. [GitHub Docs](#)

One important detail

If your `index.html` is inside a folder, for example:

```
your-repository/  
├─ website/  
│   └─ index.html  
└─ ai-conversation-transcript.pdf
```

then the link would instead need to be:

HTML

```
<a href="../../ai-conversation-transcript.pdf" target="_blank">  
    View the PDF transcript of this conversation  
</a>
```

So the location of your HTML file determines the link.

Easiest setup

I recommend making your GitHub repository look like this:

```
your-repository/  
├─ index.html  
├─ ai-conversation-transcript.pdf  
└─ style.css
```

Then this will work:

HTML

```
<a href="ai-conversation-transcript.pdf" target="_blank">  
    View the PDF transcript of this conversation  
</a>
```

If you give me the **GitHub repository link**, I can look at how your files are currently arranged and tell you the exact `href` you should use.

ChatGPT can make mistakes. Check important info.
