

Today 4:41 PM

help me fix this code. It is not showing up on my website coding. <section id="credits" style="padding: 40px; margin: 40px auto; max-width: 900px; background-color: white; border-radius: 15px;">

✦ Upgrade

<h2 style="text-align: center; font-size: 36px;">Credits</h2>

<h3>Tool & Version</h3>

<p>ChatGPT — GPT-5.6 Luna</p>

Show more ▾

Yes — the HTML itself is mostly valid. The most likely reason it **isn't showing up** is that the code is being placed somewhere your website builder doesn't allow a full <section> element, or the PDF path is causing an issue.

Here is a cleaned-up version that is safer and easier to paste into an HTML section:

HTML

&lt;/&gt;

```
<section id="credits" style="padding: 40px; margin: 40px auto; max-width: 900px; backgro
```

```
<h2 style="text-align: center; font-size: 36px;">
```

```
  Credits
```

```
</h2>
```

```
<h3>Tool & Version</h3>
```

```
<p>ChatGPT — GPT-5.6 Luna</p>
```

```
<h3>Date(s) of Use</h3>
```

```
<p>September 23, 2026</p>
```

```
<h3>Purpose</h3>
```

```
<p>Trying to create a portfolio website.</p>
```

```
<h3>AI's Contribution</h3>
```

<p>The AI generated code for the website.</p>

## One important thing to check

If none of the Credits section appears, the problem probably isn't the HTML above. Check where you're putting it.

For example, if your website currently looks like:

```
HTML

<body>

  <!-- Your other website code -->

</body>
```

put the Credits section **inside** <body> , like this:

```
HTML

<body>

  <!-- Your other website code -->

  <section id="credits" style="padding: 40px; margin: 40px auto; max-width: 900px; bac

    <h2 style="text-align: center; font-size: 36px;">
      Credits
    </h2>

    <h3>Tool & Version</h3>
    <p>ChatGPT – GPT-5.6 Luna</p>

    <h3>Date(s) of Use</h3>
    <p>September 23, 2026</p>

    <h3>Purpose</h3>
```

## If you're using a website builder

If you're using something like Google Sites, Wix, Squarespace, Canva, or another website platform, you generally can't paste this into the normal text editor. You need an HTML/embed/custom-code block.

Also, this part:

HTML

</> ▶ 📄

```
href="AI%20Transcript%20for%20Website.pdf"
```

only works if the PDF is actually located in the correct place relative to your HTML file.

For a normal HTML project, your files could look like:

my-website/

|

├─ index.html

└─ AI Transcript for Website.pdf

Then the link will work.

If your PDF is inside a folder called `files` , for example, you'd need:

HTML

</> ▶ 📄

```
<a href="files/AI%20Transcript%20for%20Website.pdf" target="_blank">
```

```
  View the PDF transcript of this conversation
```

```
</a>
```

If you send me your entire HTML code (especially the part around `<body>` ), I can put this Credits section directly into your existing website code and fix whatever is preventing it from displaying.

Got it. If the other HTML on your website is working, let's make this **extremely simple** and remove all the extra styling that could interfere with your existing page.

Try pasting this **directly inside your** `<body>` **section**, not inside `<head>` :

 HTML

```
<section id="course-objectives">

  <h2>Course Objectives</h2>

  <p>Topics I will explore throughout this course.</p>

  <h3>Coming Soon!</h3>

</section>
```

### If that works

Then you can use this slightly nicer version:

HTML

&lt;/&gt; ▶ □

```

<section id="course-objectives" style="padding: 40px; margin: 40px auto; max-width: 900p

    <h2 style="text-align: center; font-size: 36px;">
        Course Objectives
    </h2>

    <p style="text-align: center; font-size: 18px;">
        Topics I will explore throughout this course.
    </p>

    <div style="text-align: center; margin-top: 40px; padding: 30px;">
        <h3 style="font-size: 30px;">
            Coming Soon!
        </h3>
    </div>

</section>

```

## Most important

Make sure you're putting it here:

HTML

&lt;/&gt; ▶ □

```

<!DOCTYPE html>
<html>

<head>
    <title>My Portfolio</title>
</head>

<body>

    <!-- YOUR OTHER WEBSITE CONTENT -->

    <!-- COURSE OBJECTIVES GOES HERE -->
    <section id="course-objectives">

        <h2>Course Objectives</h2>

        <p>Topics I will explore throughout this course.</p>

```

**Do not put the <section> inside the <head> .**

If even the **very first simple version** doesn't appear, then there is probably something in your existing HTML that is preventing it from rendering.

If you paste your **full HTML code here**, I can find exactly where the problem is and give you back **one complete corrected HTML file** with the Course Objectives section already inserted.

```
for my credits section why it is not working! this is the  
code I am using. <section id="credits" style="padding:  
40px; margin: 40px auto; max-width: 900px; background-  
color: white; border-radius: 15px;">
```

```
<h2 style="text-align: center; font-size:  
36px;">Credits</h2>
```

```
<h3>Tool &amp; Version</h3>
```

```
<p>ChatGPT — GPT-5.6 Luna</p>
```

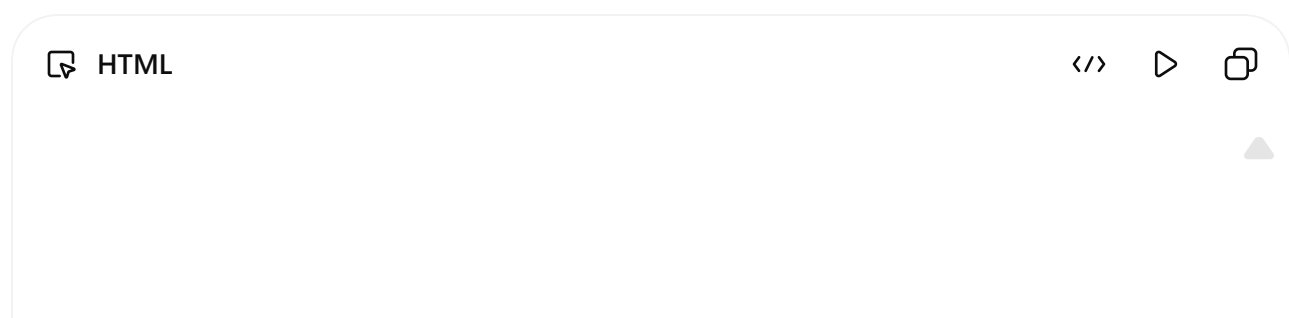

Show more ▾

Your **Credits HTML** is **valid**. There isn't a syntax error in the `<section>` you pasted that would normally prevent it from displaying.

So if **nothing at all is appearing**, the problem is probably with **where the code is being inserted into your HTML**, rather than this section itself.

Let's test it with the simplest possible version first.

## 1. Replace your current Credits section with this

```

<h3>Human Contributions</h3>
<p>
  Alina selected the proper code, checked that it appeared correctly
  on screen, and compiled the code into one website.
</p>

<h3>Conversation Transcript</h3>

<p>
  <a href="AI-Transcript-for-Website.pdf" target="_blank">
    View the PDF transcript of this conversation
  </a>

```

Notice that I removed **all of the styling** and also changed the PDF filename to a simpler filename.

## 2. Make sure it is inside <body>

Your HTML should look something like this:

HTML

```

<h3>AI's Contribution</h3>
<p>The AI generated code for the website.</p>

<h3>Human Contributions</h3>
<p>
  Alina selected the proper code, checked that it appeared correctly
  on screen, and compiled the code into one website.
</p>

<h3>Conversation Transcript</h3>

<p>
  <a href="AI-Transcript-for-Website.pdf" target="_blank">
    View the PDF transcript of this conversation
  </a>
</p>

</section>

```

## 3. Check your PDF filename

I strongly recommend changing the PDF filename from:

AI Transcript for Website.pdf

to:

AI-Transcript-for-Website.pdf

Then your files should be:

My Portfolio/

|

├─ index.html

|

└─ AI-Transcript-for-Website.pdf

The HTML and PDF need to be in the **same folder** for the link above to work.

**Important:** The PDF problem should **not prevent the Credits text from appearing**. Even if the PDF is missing, you should still see "Credits," "Tool & Version," etc. So if **the entire section is missing**, we need to look at your main HTML file.

**The fastest way for me to fix this**

**Send me your entire HTML code**, not just the Credits section.

I'll identify exactly where the problem is and give you back the corrected code with:

- your existing website preserved
- the **Credits** section working
- the **Course Objectives** section working
- the PDF link working
- no duplicate `<html>`, `<head>`, or `<body>` tags
- the sections placed in the correct location.

Today 6:22 PM

for credits I want to add another section for this chat for credits citation. I need the name of tool, version, date of used of AI. I also need When collaboration happened, Purpose: Refine and delete curtain sections that where double such as the credits section and course objectives. -

--> (use this text), AI contribution: Producing the code for the fixes and addition the citations. ----> (use this text.)  
Human Contribution: Embedding the code and selecting the properly working code. --->(use this text), for transcript I will make a pdf of this convosation and I will title the file AI Trancript 2. Give me a code for this that is an addition to the credit section

Yes. Since this is an **additional AI-credit entry** within your existing Credits section, you can paste the following code **directly underneath your first AI credit entry**.

I kept the wording you specified for the Purpose, AI Contribution, and Human Contribution sections.

```
HTML

<p>
    Producing the code for the fixes and adding the citations.
</p>

<h3>Human Contribution</h3>
<p>
    Embedding the code and selecting the properly working code.
</p>

<h3>Conversation Transcript</h3>
<p>
    <a
        href="AI-Transcript-2.pdf"
        target="_blank"
        rel="noopener noreferrer"
    >
        View the PDF transcript of this conversation
    </a>
```

## Your PDF file

Since you said you will title the file **AI Transcript 2**, I recommend naming the actual file:

AI-Transcript-2.pdf

Make sure it is in the **same folder** as your HTML file:

Your Website/

|

└─ index.html

└─ AI-Transcript-2.pdf

Then this line will open it:

HTML

</>

```
<a href="AI-Transcript-2.pdf" target="_blank">
```

## Where to put it

If your current Credits section ends like this:

HTML

</>

```
</section>
```

you **do not need another** `<section>` tag. Put the new code **inside your existing Credits section, before the final** `</section>`:

HTML

</>

```
</p>
```

```
<h3>AI Contribution</h3>
```

```
<p>
```

```
    Producing the code for the fixes and adding the citations.
```

```
</p>
```

```
<h3>Human Contribution</h3>
```

```
<p>
```

```
    Embedding the code and selecting the properly working code.
```

```
</p>
```

```
<h3>Conversation Transcript</h3>
```

```
<p>
```

```
    <a
```

```
        href="AI-Transcript-2.pdf"
```

```
        target="_blank"
```

```
        rel="noopener noreferrer"
```

This way, you have **one Credits section** containing multiple AI collaboration records, rather than accidentally creating a second separate Credits section.

ChatGPT can make mistakes. Check important info.
